Tinnitus and hearing aids

Often it is hearing loss rather than your tinnitus that makes it difficult to hear.

Many people who have tinnitus also cannot hear very well.

Hearing aids will help you hear better, and this may also help your tinnitus.

You should wear your hearing aids all the time you are awake.
Types of hearing aid

Digital hearing aids are able to meet your individual hearing needs. They also fit you exactly.

Open-fit hearing aids use a very thin tube or speaker placed in the ear canal to deliver sound.

You still hear sounds around you, and you hear direct sounds much more loudly.

Combination hearing aids are a hearing aid which also makes sounds which can help your tinnitus.
The most important thing with choosing a hearing aid is that it is correctly fitted and that it helps you hear better, even if you have tinnitus.

You can get a digital hearing aid from the NHS. Your doctor will help you see a hearing specialist who will fit one for you.

You can buy hearing aids from a private hearing aid company. You will get a good one that is really small and uses the latest technology, but it might be expensive.

You will need to check you have insurance in case it gets lost or damaged.
You need to look after your hearing aid so that it keeps working well.

If your hearing aid gets damaged or has something wrong with it, contact the place or person it came from.

Wax and water in your ear must be cleaned out. Don’t try to get wax out yourself. A nurse will remove a build-up of wax for you.
It takes a few weeks to get used to using your hearing aid and to hearing normal levels of sound again.

Many people stop noticing their tinnitus so much when they have a hearing aid, and this gets even better over time.

You should still have a hearing test every three years.
The internet has lots of information, but some of the information about hearing aids and tinnitus is not right or helpful.

Information from the British Tinnitus Association (BTA) comes from experts, and you can rely on it to be right.

For more information about tinnitus, call the BTA helpline on 0800 018 0527
